## **Curly brackets and parentheses**

**P96529\_en**

---

Write a program that reads a sequence of words with curly brackets and parentheses, and for each one prints if the curly brackets and the parentheses close correctly.

### **Input**

Input is a sequence of words consisting of ' [', ' ]', ' (' and ' )' .

### **Output**

For each word, print “yes” or “no” depending on if the curly brackets and the parentheses close correctly or not.

#### **Sample input**

```
[] ( [] () )  
(( [] ) ()  
[] (  
(( [] ))
```

#### **Sample output**

```
yes  
no  
no  
yes
```
